Combined Inactivated Vaccine in oil emulsion
Newcastle Disease virus - N018 strain;
IBV multi strains : IBV, M-41 + B003 + B004 strain

VAKSIMUNE[®] ND L-IBplus

Features :

1. Full Protection - Genetically Matching Protectotype (GMP) vaccine strains.
2. Broader Protection against - NDV virulent genotypes and - IBV Genotype I variants.
3. Whole virus vaccine technology

BENEFITS :

- Maximizes Production of virus neutralizing antibody titer in chickens.
- Maximizes Protection against reproductive, nephropathogenic, enteropathogenic and respiratory forms of IB.
- Maximizes Performance of parent flocks and their progeny chicks.
- Minimizes the viral load and pathological damages in vaccinated chicken.
- Minimize the risk of transmission of highly pathogenic VVNDV and highly replicating QX-like strains.
- Minimize indiscriminate use of live vaccines and hence, evolution / mutation of vaccine / field viruses.
- Minimizes drop in egg production, hatchability, egg quality deterioration, bacterial co-infection in flocks.
